ENTERED AT SAN FRANCISCO, CAL. AS SECOND-CLASS MATTER

JUST READY—A RECORD OF 50 YEARS' PRACTICE

## Thomson's Clinical Medicine

Dr. Thomson's work is strictly the *application* of medical learning to the relief and cure of the sick: It tells you first how to give the patient *relief*—that is what your patients want first of all. Then he tells you how to treat the disease. You get a chapter on the mechanism of "catching cold," pointing out its significance as a factor in the etiology of other diseases, and giving you the treatment. Then you get a chapter on *common symptoms* and their interpretation—pain, emaciation, cough, dyspnea, edema, vomiting. The discussion of *pain* is particularly full, giving you the significance of every kind of pain. It gives you the *diagnostic significance* of the *patient's gestures* in describing his pain. Then comes a chapter on *remedies*—their action and their special uses. Here are taken up electricity, cold, heat, habit and environment, the various classes of drugs, and *vaccines and serums*. Next comes a section of 165 pages on the *infections*, with a special chapter on infections by the bacillus coli. Next comes a large section on diseases of special tissues or organs, giving you those methods of diagnosis and treatment found valuable by Dr. Thomson himself, in many cases including tried prescriptions. A final chapter takes up *cancer* of the various organs, emphasizing early diagnosis. "Thomson" is practical from title to index.

Octavo of 667 pages. By WILLIAM HANNA THOMSON, M.D., LL.D., formerly Professor of the Practice of Medicine and Diseases of the Nervous System, New York University Medical College.

Cloth, \$5.00 net; Half Morocco, \$6.50 net.
